**REGISTRATION INFORMATION**

**Enrolment Deadline**

All sections for this course normally fill months in advance so early registration is important. As this is a required BCom course and it fills up so early, very few students drop in the open enrolment period in the first two weeks of classes. If you did not get into the course before classes started, your chances of successfully enrolling are very slim. However, you can request the Receptionist at room 282 Atkinson to add your name to a list that is maintained with the only purpose of estimating the unsatisfied demand of the course, but students are not contacted when vacancies occur. The Course Director is not involved in the registration process in any way and cannot assist you with this process. Due to the high volume of material covered and because of early dates of examinations, **no registration under any circumstances is permitted after the “last date to enroll without permission”.**

## Examination Dates

**Final examination:** This examination is scheduled by the York Registrar for the formal examination period (see above table) and thus the date of the examination is not known when this course outline is issued. You should not book travel plans in this period. Approximate date for the official exam schedule is as in the table above. Consult the York University website for official timetable information.

### Course Description :

A study of the process by which managers ensure that resources are obtained and used efficiently and effectively in accomplishing organizational objectives. Readings in cost accounting, finance, economics, business policy and social psychology are applied to analyze case studies of actual situations.

The course is designed to help you gain knowledge, insights, and analytical skills related to management accounting and control systems (MCS), and is aimed at achieving two objectives:

- 1) To develop an understanding of the concepts essential for the design of effective management accounting and control systems, and
- 2) To give each student the opportunity to improve critical skills for future career success.

Cases are the core of this course. Case studies allow you to develop and practice a systematic approach to analyzing management problems and opportunities and allows for the consideration of the type of control systems to be implemented. There is no one, single correct solution for a case, rather there are good solutions being supported by solid analyses based on theory. Case reports are expected to present and evaluate both sides of the argument before coming with a recommendation to management. Students often find cases to be difficult and frustrating, however they are the appropriate training tool for acquiring and improving:

Integrative problem-solving skills (judgment, diagnosis, analysis and communication of recommendations are developed), namely:

- Analytical skills
- Communication (oral, written and presentation) skills
- Ability to work in a team
- An understanding of how a real business functions
- Exposure to a method used in a significant portion of professional accounting
