

York University
Faculty of Liberal Arts & Professional Studies
Department of Economics

AP/ECON 1530 3.0 O
Introductory Mathematical Economics I
Winter 2024
Course Outline

1. Course Instructor Contact:

Instructor: Vassilios Bardis
Office: DB 2020
Email: vbardis@yorku.ca
Office Hours: TBA
Course website: On *eclass.yorku.ca*
Class Time: R 11:30-14:30 in ACW 006

2. Course Description (prerequisites/co-requisites):

This course presents and analyzes a sequence of basic ideas, topics and problems arising in Economics. For each idea/topic/problem relevant mathematical ideas and techniques are recalled and/or derived so as to provide a deeper understanding of the Economic issue and how it can be resolved, if necessary. The notion of Quantity Demanded is first addressed by expressing quantity demanded as a linear function of price where both the slope and intercept embed important Economics ideas. This sequence leads naturally to the notion of Revenue (the product of quantity demanded and price) where nonlinear functions are analyzed using mathematical techniques that include derivatives. This sequence culminates with notions of prices that maximize revenue subject to a given demand function. A large number of such topic sequences involving univariate functions are examined.

Prerequisite: Grade 12U Advanced Functions or equivalent.

Prerequisites/Co-requisites: AP/ECON 1000 3.00 or AP/ECON 1010 3.00, or equivalent. Strongly recommended completion: high-school calculus or equivalent.

Course credit exclusions: SC/MATH 1000 3.00, SC/MATH 1013 3.00, SC/MATH 1300 3.00, SC/MATH 1505 6.00, SC/MATH 1513 6.00, SC/MATH 1530 3.00, SC/MATH 1550 6.00, GL/MATH/MODR 1930 3.00. Note: Acceptable course substitutes are available in the Calendar.

3. Some Important Dates

Classes start / end	Jan. 8 / Apr. 8
Last date to add a course without / with permission of instructor	Jan. 22/ Jan. 31
Last date to drop course without receiving a grade	March 11
Course Withdrawal Period (withdraw from a course and receive a "W" on the transcript)	March 12 - April 8
Examination Period	April 10-26
Reading Week	Feb. 17-23
Holiday (University Closed)	March 29

4. Grading

The course grade will be based on **two term tests worth 25% each** and to be held in class and a **final exam, worth 50%, to be held during the examination period**. Term test dates will be posted on the course website on the first week of classes. The final exam will be comprehensive. The final exam date will be scheduled and posted by the Registrar's office.

There are no deferred tests for missed term tests. Anyone missing a term test will automatically have the weight of the missed test added to the weight of the final exam. If a student receives a higher grade on the final exam than on a term test, the final exam grade will be substituted for the lower test grade.

Students who are unable to write the final exam must follow the steps described on <https://www.yorku.ca/laps/econ/undergraduate-programs/academic-resources/department-policies/deferred-standing/>

- **Observance Dates**: Students for whom the midterm test date coincides with a religious observance must let me know within the first two week of classes. If there is such a conflict with respect to the final exam, students must complete an 'Examination Accommodation Agreement' soon after the final exam date is published. (This form can be obtained from the Registrar's office.)
- **Policy on Reappraisal of Term Work**: Reappraisal of students' term work should be completed during the term.
- **Note on Senate Policy on Academic Honesty**: Conduct that violates the ethical or legal standards of the University community or of one's program or specialization may result in serious consequences. Students are encouraged to familiarize themselves with the Senate Policy. **Please note that only basic calculators can be used during tests and exams.**
- **Note on the use of Electronic Devices**: All electronic devices must be turned off during class and during exams. Audio/visual recordings of any type are *not* allowed.

4. Course Textbook (Optional but Strongly Recommended)

Essential Mathematics for Economic Analysis, sixth edition, Knut Sydsaeter and Peter Hammond with Arne Strom, Prentice Hall.

5. Topics to be covered

- a) Review of basic algebra, equations and inequalities
- b) Functions of one variable, Properties of functions
- c) Differentiation, Derivatives in use, Single-variable optimization
- d) Integration

6. Useful Links
